

Implement, export and import groups of subjects

The BRAPH 2 Developers

September 20, 2023

This is the developer tutorial for implementing, exporting and importing groups of subjects with a certain type of data.

In this Tutorial, we will explain how to create generator files *.gen.m for new subjects and well as exporting and importing subjects files. All *.gen.m files can then be compiled by braph2genesis.

All types of subjects are extensions of the base element Subject. In this tutorial, we will use as examples the subjects SubjectCON (subject with connectivity data), SubjectCON_MP (subject with connectivity multiplex data), SubjectFUN (subject with functional data), SubjectFUN_MP (subject with functional multiplex data), SubjectST (subject with structural data), and SubjectST_MP (subject with structural multiplex data).

Furthermore, all types of exporters and importers are extensions of the base elements Exporter and Importer respectively. Here, we will use as examples ExporterGroupSubjectCON_TXT (exports a group of subjects with connectivity data to a series of TXT file), ExporterGroupSubjectCON_XLS (exports a group of subjects with connectivity data to a series of XLSX file), ImporterGroupSubjectCON_TXT (imports a group of subjects with connectivity data to a series of TXT file) and ImporterGroupSubjectCON_XLS (imports a group of subjects with connectivity data to a series of XLSX file).

Implementation of a subject with connectivity data

Subject with connectivity data (SubjectCON)

We will start by implementing in detail SubjectCON. The connectivity matrix can be obtained from DTI data.

Code 1: SubjectCON element header. The header section of the generator code for `_SubjectCON.gen.m` provides the general information about the SubjectCON element.

```

1 %% iheader!
2 SubjectCON < Subject (sub, subject with connectivity matrix) is a subject
   with connectivity matrix (e.g. DTI). ①
3
4 %%% idescription!
5 Subject with a connectivity matrix (e.g. obtained from DTI).
6
7 %%% iseealso! ②
8 ImporterGroupSubjectFUN_TXT, ExporterGroupSubjectFUN_TXT,
   ImporterGroupSubjectFUN_XLS, ExporterGroupSubjectFUN_XLS

```

① The element SubjectCON is defined as a subclass of Subject. The moniker will be sub.

② Other related functions.

Code 2: SubjectCON element prop update. The `props_update` section of the generator code for `_SubjectCON.gen.m` updates the properties of the Subject element. This defines the core properties of the subject.

```

1 %% iprops_update!
2
3 %%% iprop!
4 NAME (constant, string) is the name of the subject.
5 %%% idefault!
6 'SubjectCON'
7
8 %%% iprop!
9 DESCRIPTION (constant, string) is the description of the subject.
10 %%% idefault!
11 'SubjectCON with a connectivity matrix (e.g. obtained from DTI).'
12
13 %%% iprop!
14 TEMPLATE (parameter, item) is the template of the subject.
15 %%% isettings!
16 'SubjectCON'
17
18 %%% iprop!
19 ID (data, string) is a few-letter code for the subject.
20 %%% idefault!
21 'SubjectCON ID'
22
23 %%% iprop!
24 LABEL (metadata, string) is an extended label of the subject.
25 %%% idefault!
26 'SubjectCON label'
27
28 %%% iprop!
29 NOTES (metadata, string) are some specific notes about the subject.
30 %%% idefault!

```

```

31 'SubjectCON notes'
32
33 %% iprops!
34
35 %% iprop!
36 BA (data, item) is a brain atlas.
37 %%%% isettings!
38 'BrainAtlas'
39
40
41 %% iprop!
42 CON (data, smatrix) is an adjacency matrix.
43 %%%% icheck_value!
44 br_number = sub.get('BA').get('BR_DICT').get('LENGTH'); ①
45 check = isequal(size(value), [br_number, br_number]); ②
46 if check ③
47     msg = 'All ok!';
48 else
49     msg = ['CON must be a square matrix with the dimension equal to the
50           number of brain regions (' int2str(br_number) ').'];
51 end
52 %%%% igui! ④
53 pr = PanelPropMatrix('EL', sub, 'PROP', SubjectCON.CON, ...
54     'ROWNAME', sub.get('BA').get('BR_DICT').getCallback('KEYS'), ...
55     'COLUMNNAME', sub.get('BA').get('BR_DICT').getCallback('KEYS'), ...
56     varargin{:});

```

① defines the number of brain regions from the Brain Atlas.

② The value is the data matrix. Checking the size of value is equal to the number of brain regions.

③ returns the check information msg according to the variable check.

④ plots the panel of a property matrix-like with element sub and the property number SubjectCon.Con. ROWNAME and COLUMNNAME are the name of regions from brain atlas.

Code 3: **SubjectCON element tests.** The tests section from the element generator `_SubjectCON.gen.m`. A general test should be prepared to test the properties of the Subject when it is empty and full. Furthermore, additional tests should be prepared for the rules defined.

```

1 %% itests!
2
3 %%% itest!
4 %%% iname!
5 GUI ①
6 %%% iprobability! ②
7 .01
8 %%% icode!
9 im_ba = ImporterBrainAtlasXLS('FILE', 'desikan_atlas.xlsx'); ③
10 ba = im_ba.get('BA'); ④
11
12 gr = Group('SUB_CLASS', 'SubjectCON', 'SUB_DICT', IndexedDictionary('
    IT_CLASS', 'SubjectCON')); ⑤
13 for i = 1:1:50 ⑥
14     sub = SubjectCON( ... ⑦
15         'ID', ['SUB CON ' int2str(i)], ...
16         'LABEL', ['Subejct CON ' int2str(i)], ...
17         'NOTES', ['Notes on subject CON ' int2str(i)], ...
18         'BA', ba, ...
19         'CON', rand(ba.get('BR_DICT').get('LENGTH')) ...
20     );
21     sub.memorize('VOI_DICT').get('ADD', VOINumeric('ID', 'Age', 'V', 100 *
        rand())) ⑧
22     sub.memorize('VOI_DICT').get('ADD', VOICategoric('ID', 'Sex', '
        CATEGORIES', {'Female', 'Male'}, 'V', randi(2, 1))) ⑨
23     gr.get('SUB_DICT').get('ADD', sub) ⑩
24 end
25
26 gui = GUIElement('PE', gr, 'CLOSEREQ', false); ⑪
27 gui.get('DRAW') ⑫
28 gui.get('SHOW') ⑬
29
30 gui.get('CLOSE') ⑭

```

① checks that GUI is constructing well.

② assigns a low test execution probability.

③ imports the brain atlas desikan from the file 'desikan_atlas.xlsx'. There are also other atlases in Braph2 folder atlases, including aal90_atlas.xlsx, aal116_atlas.xlsx, bna_atlas.xlsx, craddock_atlas.xlsx, desikan_subcortical_atlas.xlsx, destrieux_atlas.xlsx, destrieux_subcortical_atlas.xlsx, schaefer200_atlas.xlsx and subcortical_atlas.xlsx.

④ returns the brain atlas.

⑤ represents a group of subjects whose class is defined in the property 'SUB_CLASS'. 'SUB_DICT' manages the subjects as an indexed dictionary of subjects.

⑥ construts 50 subjects.

⑦ defines the 'ID', 'LABEL', 'NOTES', 'BA' (Brain Atlas) and 'CON' (a random adjacency matrix) for a subject.

⑧ adds a random Numeric 'Age' as the variable of interest of the subject.

⑨ adds a random Categoric 'Sex' as the variable of interest of the subject.

⑩ adds 'sub' into group.

⑪ constructs the GUI panel from gr. Setting the 'CLOSEREQ' to false means doesn't confirm whether the GUI is close.

⑫ draws the contents of a GUI before showing it.

⑬ shows the figure and its dependent figures.

⑭ closes the figure and its dependent figures.

Subject with connectivity multiplex data (SubjectCON_MP)

We can now use SubjectCON as the basis to implement the SubjectCON_MP. The parts of the code that are modified are highlighted. The multi-layer data allows connections between any nodes across the multiple layers. The SubjectCON_MP can also be used on ordinal multilayer data.

Code 4: SubjectCON_MP element header. The header section of the generator code for `_SubjectCON_MP.gen.m` provides the general information about the SubjectCON_MP element. [← Code 1](#)

```

1
2 %% iheader!
3 SubjectCON_MP < Subject (sub, subject with connectivity multiplex data) is a
  subject with connectivity multiplex data.
4
5 %%% idescription!
6 Subject with L connectivity matrices (e.g. obtained from DTI).
7
8 %%% iseealso!
9 ImporterGroupSubjectCON_MP_TXT, ExporterGroupSubjectCON_MP_TXT,
  ImporterGroupSubjectCON_MP_XLS, ExporterGroupSubjectCON_MP_XLS

```

Code 5: SubjectCON_MP element prop update. The `props_update` section of the generator code for `_SubjectCON_MP.gen.m` updates the properties of the Subject element. [← Code 2](#)

```

42 %%% idefault!
43 2 ②
44
45 %% iprop!
46 LAYERLABELS (metadata, stringlist) are the layer labels provided by the user
   . ③
47
48 %% iprop!
49 ALAYERLABELS (query, stringlist) returns the processed layer labels. ④
50 %%% icalculate!
51 value = sub.get('LAYERLABELS'); ⑤
52
53 %% iprop!
54 CON_MP (data, cell) is a cell containing L matrices corresponding
   connectivity matrices of each layer.
55 %%% ickvalue!
56 br_number = sub.get('BA').get('BR-DICT').get('LENGTH');
57 num_layers = sub.get('L'); ⑥
58 check = (iscell(value) && isequal(length(value), num_layers) && isequal(
   cellfun(@(v) size(v, 1), value), ones(1, num_layers) * br_number) &&
   isequal( cellfun(@(v) size(v, 2), value), ones(1, num_layers) *
   br_number)) || (isempty(value) && br_number == 0); ⑦
59 if check
60     msg = 'All ok!';
61 else
62     msg = ['CON_MP must be a cell with L square matrices with the dimension
   equal to the number of brain regions (' int2str(br_number) ').'];
63 end
64 %%% igui!
65 pr = PanelPropCell('EL', sub, 'PROP', SubjectCON_MP.CON_MP, ...
66     'TABLE_HEIGHT', s(40), ... ⑧
67     'XSLIDERSHOW', true, ... ⑨
68     'XSLIDERLABELS', sub.getCallback('ALAYERLABELS'), ... ⑩
69     'YSLIDERSHOW', false, ... ⑪
70     'ROWNAME', sub.get('BA').get('BR-DICT').getCallback('KEYS'), ...
71     'COLUMNNAME', sub.get('BA').get('BR-DICT').getCallback('KEYS'), ...
72     varargin{:});

```

① defines a parameter to determine the number of layers of subject data. This property must be of a scalar parameter.

② defines the default option, in this case '2'.

③ defines a parameter to determine the labels for each layer. This property must be of string list parameter.

④ defines a parameter to determine the processed labels for each layer. This property must be of string list parameter.

⑤ defines the value from the property 'LAYERLABELS' of SubjectCON_MP.

⑥ defines the number of layers.

⑦ checks the size of each layer is equal to the number of brain regions.

⑧ defines the height of table.

⑨ defines the option of showing in X-axis slider.

⑩ defines the X-axis sliders' labels.

⑪ defines the option of not showing in Y-axis slider.

Code 6: SubjectCON_MP element tests. The tests section from the element generator _SubjectCON_MP.gen.m. ← [Code 3](#)

```

1 %% itests!
2
3 %%% itest!
4 %%% iname!
5 GUI

```

```

6 %%% iprobability!
7 .01
8 %%% icode!
9 im_ba = ImporterBrainAtlasXLS('FILE', 'aal90_atlas.xlsx');
10 ba = im_ba.get('BA');
11
12 gr = Group('SUB_CLASS', 'SubjectCON_MP', 'SUB_DICT', IndexedDictionary('
    IT_CLASS', 'SubjectCON_MP'));
13 for i = 1:1:10
14     sub = SubjectCON_MP( ...
15         'ID', ['SUB CON_MP ' int2str(i)], ...
16         'LABEL', ['Subejct CON_MP ' int2str(i)], ...
17         'NOTES', ['Notes on subject CON_MP ' int2str(i)], ...
18         'BA', ba, ...
19         'L', 3, ... ①
20         'LAYERLABELS', {'L1' 'L2' 'L3'}, ... ②
21         'CON_MP', {rand(ba.get('BR_DICT').get('LENGTH')), rand(ba.get('
    BR_DICT').get('LENGTH')), rand(ba.get('BR_DICT').get('LENGTH'))} ...
22     ); ③
23     sub.memorize('VOI_DICT').get('ADD', VOINumeric('ID', 'Age', 'V', 100 *
        rand()))
24     sub.memorize('VOI_DICT').get('ADD', VOICategorical('ID', 'Sex', '
        CATEGORIES', {'Female', 'Male'}, 'V', randi(2, 1)))
25     gr.get('SUB_DICT').get('ADD', sub)
26 end
27
28 gui = GUIElement('PE', gr, 'CLOSEREQ', false);
29 gui.get('DRAW')
30 gui.get('SHOW')
31
32 gui.get('CLOSE')

```

① defines the number of layers.

② defines the label of each layer.

③ constructs 3 layers randomly with size of brain regions by brain regions.

Implementation of Importer and Exporter of the data (for Subject-CON)

Importer of a CON subject group from TXT (ImporterGroupSubjectCON_TXT)

We will start by implementing in detail ImporterGroupSubjectCON_TXT. The data should be stored in the folder 'Group1' and 'Group2', and the file format is '.txt'.

Code 7: ImporterGroupSubjectCON_TXT element

header. The header section of the generator code for `_ImporterGroupSubjectCON_TXT.gen.m` provides the general information about the Importer element.

```

1
2 %% iheader!
3 ImporterGroupSubjectCON_TXT < Importer (im, importer of CON subject group
    from TXT) imports a group of subjects with connectivity data from a
    series of TXT files. ①
4
5 %%% idescription!
6 ImporterGroupSubjectCON_XLS imports a group of subjects with connectivity
    data from a series of XLS/XLSX files contained in a folder named "
    GROUP_ID". All these files must be in the same folder; also, no other
    files should be in the folder. Each file contains a table of values
    corresponding to the adjacency matrix. The variables of interest are
    from another XLS/XLSX file named "GROUP_ID.vois.xlsx" (if existng)
    consisting of the following columns: Subject ID (column 1), covariates
    (subsequent columns). The 1st row contains the headers, the 2nd row a
    string with the categorical variables of interest, and each subsequent
    row the values for each subject.
7
8 %%% iseealso!
9 Group, SunjectCON, ExporterGroupSubjectCON_TXT

```

① The element `ImporterGroupSubjectCON_TXT` is defined as a subclass of `Importer`. The moniker will be `im`.

Code 8: ImporterGroupSubjectCON_TXT element prop

update. The `props_update` section of the generator code for `_ImporterGroupSubjectCON_TXT.gen.m` updates the properties of the Importer element.

```

107 subject ' num2str(i) ' of ' num2str(length(files)) ' ...']) (18)
108
109                     [~, sub_id] = fileparts(files(i).name);
110                     CON = table2array(readtable(fullfile(directory, files(i).
111 name), 'Delimiter', '\t')); (19)
112                     if size(CON, 1) ~= ba.get('BR_DICT').get('LENGTH') || size(
113 CON, 2) ~= ba.get('BR_DICT').get('LENGTH') (20)
114                         error( ...
115                             [BRAPH2.STR ':' class(im) ':' BRAPH2.ERR_IO], ...
116                             [BRAPH2.STR ':' class(im) ':' BRAPH2.ERR_IO '\n']
117 ...
118                             'The file ' sub_id ' should contain a matrix '

```

(5) constructs an empty Group.

(6) locks the property 'SUB_CLASS' irreversibly.

(7) returns the data directory from previous saving (2).

(8) checks the folder is exist.

(9) creates the waitbar with an initial progress of 0. Displaying the character 'Reading directory ...'.

(10) returns the folder name from folder directory.

(11) sets the properties 'ID', 'LABEL' and 'NOTES' for Group.

(12) finds all all txt files in the directory.

(13) returns the brain atlas.

(14) checks the number of nodes in brain atlas is equal to 0.

(15) adds the number of regions of the first file to the brain atlas.

(16) adds the 'ID' of each brain region.

(17) adds the subjects.

(18) updates the waitbar for each file.

(19) reads each file with Delimiter of tab.

(20) checks the number of the nodes in file is equal to the number of nodes in atlas.

```

113 int2str(ba.get('BR_DICT').get('LENGTH')) 'x' int2str(ba.get('BR_DICT').
114 get('LENGTH')) ', ' ...
115         'while it is ' int2str(size(CON, 1)) 'x' int2str(

```

(28) determines which edges should be rewired based on the probability beta.

(29) to (30) determines the new target nodes for the edges that are being rewired, ensuring that the new target is not the source node itself or any of its current neighbors.

(31) creates a graph h from the source nodes s and target nodes t.

(32) imports the txt file of each subject in the group.

(33) returns a group of subjects with connectivity data.

(34) assigns the panel element and don't confirm close.

Importer of a CON subject group from XLS/XLSX (ImporterGroupSubjectCON_XLS)

In this section we will show how to implement in detail `ImporterGroupSubjectCON_XLS`. The data should be stored in the folder 'Group1' and 'Group2', and the file format is '.xls' or '.xlsx'.

Code 10: ImporterGroupSubjectCON_XLS element

header. The header section of the generator code for `_ImporterGroupSubjectCON_XLS.gen.m` provides the general information about the Importer element. ← [Code 7](#)

```

1
2 %% iheader!
3 ImporterGroupSubjectCON_XLS < Importer (im, importer of CON subject group
    from XLS/XLSX) imports a group of subjects with connectivity data from
    a series of XLS/XLSX file.
4
5 %%% idescription!
6 ImporterGroupSubjectCON_XLS imports a group of subjects with connectivity
    data from a series of XLS/XLSX files contained in a folder named "
    GROUP_ID". All these files must be in the same folder; also, no other
    files should be in the folder. Each file contains a table of values
    corresponding to the adjacency matrix. The variables of interest are
    from another XLS/XLSX file named "GROUP_ID.vois.xlsx" (if existng)
    consisting of the following columns: Subject ID (column 1), covariates
    (subsequent columns). The 1st row contains the headers, the 2nd row a
    string with the categorical variables of interest, and each subsequent
    row the values for each subject.

Exporter of a CON subject group from TXT (ExporterGroupSubjectCON_TXT)

In this section we will show how to implement in detail ExporterGroupSubjectCON_TXT.

The data should be stored in the folder 'Group1' and 'Group2', and the file format is '.txt'.

Code 13: ExporterGroupSubjectCON_TXT element

header. The header section of the generator code for _ExporterGroupSubjectCON_TXT.gen.m provides the general information about the Exporter element.

```

1
2 %% iheader!
3 ExporterGroupSubjectCON_TXT < Exporter (ex, exporter of CON subject group in
  TXT) exports a group of subjects with connectivity data to a series of
  TXT file. ①
4
5 %%% idescription!
6 ExporterGroupSubjectCON_TXT exports a group of subjects with connectivity
  data to a series of tab-separated TXT files contained in a folder named
  "GROUP_ID". All these files are saved in the same folder. Each file
  contains a table of values corresponding to the adjacency matrix. The
  variables of interest (if existing) are saved in another tab-separated
  TXT file named "GROUP_ID.vois.txt" consisting of the following columns:
  Subject ID (column 1), covariates (subsequent columns). The 1st row
  contains the headers, the 2nd row a string with the categorical
  variables of interest, and each subsequent row the values for each
  subject.
7
8 %%% iseealso!
9 Group, SunbjectCON, ExporterGroupSubjectCON_TXT

```

① The element ExporterGroupSubjectCON_TXT is defined as a subclass of Exporter. The moniker will be ex.

Code 14: ExporterGroupSubjectCON_TXT element prop

update. The props_update section of the generator code for _ExporterGroupSubjectCON_TXT.gen.m updates the properties of the Exporter element.

```

⑪ deletes the testing data.

Exporter of a CON subject group from XLS/XLSX (ExporterGroupSubjectCON_XLS)

In this section we will show how to implement in detail ExporterGroupSubjectCON_XLS. The data should be stored in the folder 'Group1' and 'Group2', and the file format is '.txt'.

Code 16: ExporterGroupSubjectCON_XLS element

header. The header section of the generator code for _ExporterGroupSubjectCON_XLS.gen.m provides the general information about the Exporter element. ← [Code 13](#)

```

1
2 %% iheader!
3 ExporterGroupSubjectCON_XLS < Exporter (ex, exporter of CON subject group in
  XLSX) exports a group of subjects with connectivity data to a series
  of XLSX file.
4
5 %%% idescription!
6 ExporterGroupSubjectCON_XLS exports a group of subjects with connectivity
  data to a series of XLSX files contained in a folder named "GROUP_ID".
  All these files are saved in the same folder. Each file contains a
  table of values corresponding to the adjacency matrix. The variables of
  interest (if existing) are saved in another XLSX file named "GROUP_ID.
  vois.xlsx" consisting of the following columns: Subject ID (column 1),
  covariates (subsequent columns). The 1st row contains the headers, the
  2nd row a string with the categorical variables of interest, and each
  subsequent row the values for each subject.
7
8 %%% iseealso!
9 Group, SunjectCON, ImporterGroupSubjectCON_XLS

```

Code 17: ExporterGroupSubjectCON_XLS element prop

update. The props_update section of the generator code for _ExporterGroupSubjectCON_XLS.gen.m updates the properties of the Exporter element. ← [Code ??](#)
