

# *Implement a new Neural Network Data Point*

*The BRAPH 2 Developers*

*September 19, 2023*

This is the developer tutorial for implementing a new neural network data point. In this Tutorial, we will explain how to create the generator file `*.gen.m` for a new neural network data point, which can then be compiled by `braph2genesis`. All kinds of neural network data point are (direct or indirect) extensions of the base element `NNDataPoint`. Here, we will use as examples the neural network data point `NNDataPoint_CON_REG` (connectivity data for regression), `NNDataPoint_CON_CLA` (connectivity data for classification), `NNDataPoint_Graph_REG` (adjacency matrix for regression), `NNDataPoint_Graph_CLA` (adjacency matrix for classification), `NNDataPoint_Measure_REG` (graph measure for regression), and `NNDataPoint_Measure_CLA` (graph measure for classification).

## Implementation of a Data Point with Connectivity Data

### Connectivity Data Point for Regression (NNDataPoint\_CON\_REG)

We will start by implementing in detail `NNDataPoint_CON_REG`, which is a direct extension of `NNDataPoint`. A data point for regression with connectivity data `NNDataPoint_CON_REG` contains the input and target for neural network analysis with a subject with connectivity data (`SubjectCON`), where the input is the subject's connectivity data and the target is the subject's variables of interest.

**Code 1: `NNDataPoint_CON_REG` element header.** The header section of the generator code for `_NNDataPoint_CON_REG.gen.m` provides the general information about the `NNDataPoint_CON_REG` element.

---

```

1 %% iheader!
2 NNDataPoint_CON_REG < NNDataPoint (dp, connectivity regression data point)
   is a data point for regression with connectivity data.
3
4
5 %% idescription!
6 A data point for regression with connectivity data (NNDataPoint_CON_REG)
7 contains the input and target for neural network analysis with a subject
   with connectivity data (SubjectCON).
8 The input is the connectivity data of the subject.
9 The target is obtained from the variables of interest of the subject.
```

---

① defines `NNDataPoint_CON_REG` as a subclass of `NNDataPoint`. The moniker will be `dp`.

**Code 2: `NNDataPoint_CON_REG` element prop up-date.** The `props_update` section of the generator code for `_NNDataPoint_CON_REG.gen.m` updates the properties of the `NNDataPoint_CON_REG` element. This defines the core properties of the data point.

---

```

1 %% iprops_update!
2
3 %% iprop!
4 NAME (constant, string) is the name of a data point for regression with
   connectivity data.
5 %%%% idefault!
6 'NNDataPoint_CON_REG'
7
8 %% iprop!
9 DESCRIPTION (constant, string) is the description of a data point for
   regression with connectivity data.
10 %%%% idefault!
11 'A data point for regression with connectivity data (NNDataPoint_CON_REG)
   contains the input and target for neural network analysis with a
   subject with connectivity data (SubjectCON). The input is the
   connectivity data of the subject. The target is obtained from the
   variables of interest of the subject.'
```

32
33 %% iprop! ①
34 INPUT (result, cell) is the input value for this data point.
35 %%% icalculate!
36 value = {dp.get('SUB').get('CON')};
37
38 %% iprop! ②
39 TARGET (result, cell) is the target value for this data point.
40 %%% icalculate!
41 value = cellfun(@(x) dp.get('SUB').get('VOI_DICT').get('IT', x).get('V'), dp
    .get('TARGET_IDS'), 'UniformOutput', false);

```

① The property INPUT is the input value for this data point, which is obtained directly from the connectivity of Subject\_CON by the code under icalculate!.

② The property TARGET is the target value for this data point, which is obtained directly from the variables of interest of VOI\_DICT by the code under icalculate!.

---

Code 3: NNDataPoint\_CON\_REG element props. The props section of generator code for \_NNDataPoint\_CON\_REG.gen.m defines the properties to be used in NNDataPoint\_CON\_REG.

---

```

1 %% iprops!
2
3 %% iprop! ①
4 SUB (data, item) is a subject with connectivity data.
5 %%% isettings!
6 'SubjectCON'
7
8 %% iprop! ②
9 TARGET_IDS (parameter, stringlist) is a list of variable-of-interest IDs to
    be used as regression targets.

```

① The property SUB is a subject with connectivity data (Subject\_CON), which is used to calculate the mentioned properties INPUT and TARGET.

② The property TARGET\_IDS defines the targets, where the targets should be from the subject's variable-of-interest IDs.

Code 4: **NNDataPoint\_CON\_REG element tests**. The tests section from the element generator `_NNDataPoint_CON_REG.gen.m`. A test for creating example files should be prepared to test the properties of the data point. Furthermore, additional test should be prepared for validating the value of input and target for the data point.

## Implementation of a Data Point with a Graph

### Graph Data Point for Regression (NNDataPoint\_Graph\_REG)

Now we implement NNDataPoint\_Graph\_REG based on previous codes NNDataPoint\_CON\_REG. This neural network datapoint with graphs utilizes the adjacency matrix extracted from the derived graph of the subject. The modified parts of the code are highlighted.

**Code 9: NNDataPoint\_Graph\_REG element header.** The header section of the generator code for \_NNDataPoint\_Graph\_REG.gen.m provides the general information about the NNDataPoint\_Graph\_REG element.

---

```

1 %% iheader!
2 NNDataPoint_Graph_REG < NNDataPoint (dp, measure regression) data point) is
  a data point for regression with a graph.
3
4 %%% idescription!
5 A data point for regression with a graph (NNDataPoint_Graph_REG)
6 contains both input and target for neural network analysis.
7 The input is the value of the adjacency matrix extracted from the derived
  graph of the subject.
8 The target is obtained from the variables of interest of the subject.

```

---

**Code 10: NNDataPoint\_Graph\_REG element prop update.** The props\_update section of the generator code for \_NNDataPoint\_Graph\_REG.gen.m updates the properties of the NNDataPoint\_Graph\_REG element. This defines the core properties of the data point.

---

```

### *Graph Data Point for Classification (NNDataPoint\_Graph\_CLA)*

Now we implement `NNDataPoint_Graph_CLA` based on previous codes `NNDataPoint_CON_CLA`. This neural network datapoint with graphs utilizes the adjacency matrix extracted from the derived graph of the subject. The modified parts of the code are highlighted.

**Code 13: NNDataPoint\_Graph\_CLA element header.** The header section of the generator code for `_NNDataPoint_Graph_CLA.gen.m` provides the general information about the `NNDataPoint_Graph_CLA` element.

---

```

1 %% iheader!
2 NNDataPoint_Graph_CLA < NNDataPoint (dp, graph classification data point) is
  a data point for classification with a graph.
3
4 %%% idescription!
5 A data point for classification with a graph (NNDataPoint_Graph_CLA)
6 contains both input and target for neural network analysis.
7 The input is the value of the adjacency matrix extracted from the derived
  graph of the subject.
8 The target is obtained from the variables of interest of the subject.

```

---

**Code 14: NNDataPoint\_Graph\_CLA element prop update.** The `props_update` section of the generator code for `_NNDataPoint_Graph_CLA.gen.m` updates the properties of the `NNDataPoint_Graph_CLA` element. This defines the core properties of the data point.

---

```

1 %% iprops_update!

## Implementation of a Data Point with Graph Measures

### Graph Measure Data Point for Regression (NNDataPoint\_Measure\_REG)

Now we implement NNDataPoint\_Measure\_REG based on previous codes NNDataPoint\_Graph\_REG. This neural network datapoint utilizes graph measures obtained from the adjacency matrix from the derived graph of the subject. The modified parts of the code are highlighted.

#### Code 17: NNDataPoint\_Measure\_REG element

**header.** The header section of the generator code for `_NNDataPoint_Measure_REG.gen.m` provides the general information about the NNDataPoint\_Measure\_REG element.

---

```

1 %% iheader!
2 NNDataPoint_Measure_REG < NNDataPoint (dp, measure regression data point)
   is a data point for regression with graph measures.
3
4 %% idescription!
5 A data point for regression with graph measures (NNDataPoint_Measure_REG)
6 contains both input and target for neural network analysis.
7 The input is the value of the graph measures (e.g. Degree, DegreeAv, and
   Distance),
8 calculated from the derived graph of the subject.
9 The target is obtained from the variables of interest of the subject.

```

---

#### Code 18: NNDataPoint\_Measure\_REG element prop up-

**date.** The props\_update section of the generator code for `_NNDataPoint_Measure_REG.gen.m` updates the properties of the NNDataPoint\_Measure\_REG element. This defines the core properties of the data point.

---

```

Now we implement NNDataPoint\_Measure\_CLA based on previous codes NNDataPoint\_Graph\_CLA. This neural network datapoint utilizes graph measures obtained from the adjacency matrix from the derived graph of the subject. The modified parts of the code are highlighted.

#### Code 21: NNDataPoint\_Measure\_CLA element

**header.** The header section of the generator code for `_NNDataPoint_Measure_CLA.gen.m` provides the general information about the NNDataPoint\_Measure\_CLA element.

---

```

1 %% iheader!
2 NNDataPoint_Measure_CLA < NNDataPoint (dp, measure classification data point
   ) is a data point for classification with graph measures.
3
4 %%% idescription!
5 A data point for classification with graph measures (NNDataPoint_Measure_CLA
   )
6 contains both input and target for neural network analysis.
7 The input is the value of the graph measures (e.g. Degree, DegreeAv, and
   Distance),
8 calculated from the derived graph of the subject.
9 The target is obtained from the variables of interest of the subject.

```

---

#### Code 22: NNDataPoint\_Measure\_CLA element prop up-

**date.** The props\_update section of the generator code for `_NNDataPoint_Measure_CLA.gen.m` updates the properties of the NNDataPoint\_Measure\_CLA element. This defines the core properties of the data point.

```

---

① calculates or extract the graph measures, which are specified with `M_LIST` from a Graph element for this data point. Note that a Graph can be any kind of Graph, including `GraphWU`, `MultigraphBUD`, and `MultiplexBUT`, among others.

① defines the graph measure list which will be obtained as `INPUT` for this data point.

Code 24: **NNDataPoint\_Measure\_CLA element tests.** The tests section from the element generator `_NNDataPoint_Measure_CLA.gen.m`. A test for creating example files should be prepared to test the properties of the data point. Furthermore, additional test should be prepared for validating the value of input and target for the data point.
